

For pouring concrete into columns or narrow formwork and often where access is difficult. Extra heavy duty and rugged design with pull rope for opening the discharge gate. At the end of the opening operation the discharge valve is closed automatically by a spring retractor.

The concrete skip is built in conformance with official labour safety regulations. Standard version supplied fitted with 3.0m flexible tube, which allows concrete to be poured without segregation. Designed to lay down when standing on the ground to assist filling. When lifted, the skip then returns to its vertical position.

Designed as the 1036 skip but the discharge outlet and pipe are offset together with the more vertical hopper to allow the skip to operate closer to existing structures.
